IRD INTRODUCES PORTABLE WEIGH-IN-MOTION SCREENING SYSTEM FOR MOBILE ENFORCEMENT

May 18, 2004 - The DAW 300PC Weigh-in-Motion system from International Road Dynamics Inc. (IRD) is a completely portable WIM screening system designed for mobile enforcement operations. The DAW 300PC is easy to transport and set up and comes with a rugged carrying case for the electronics and laptop computer. The complete system can easily fit into an intermediate-sized car or small truck.

The system is comprised of three components: Two weighpads, accompanied by leveling grids and ramps leading to and away from the pads; DAW 300PC electronics, and an integrated laptop computer. These components are easy to set up for a complete slow speed weigh-in-motion scale operation.

The DAW 300PC is designed to handle loads up to 20,000 Kg (44,000 lbs) per axle and is rugged enough to withstand temperatures of -35° to +70° C (-30° to +158° F) As a slow speed WIM system, the weighpads provide consistently high accuracy at speeds up to 65 kph (40 mph).

The DAW 300PC is ideally designed for mobile enforcement screening operations covering numerous sites. Limits for axle and gross vehicle weights can be programmed into the electronics. If the pre-programmed weight limits are exceeded, an alarm tone will sound to notify the operator that the vehicle is overweight. A printer is standard and will provide a record of the measured loads.
