IRD IN-VEHICLE-SYSTEMS SALES SURPASS 1500 UNIT MILESTONE

December 20, 2004 – With the delivery and installation of their 1500th Driver and Fleet Management System this month, IRD has increased revenues in this market by over 250% in the last year. This reflects a quick return on their development investment in more highly functional and integrated vehicle management solutions utilizing state-of-the-art wireless RF, cellular communication and GPS technologies in conjunction with the basic on board computer system provided through their exclusive partnership with Siemens VDO Automotive. With the expansion of their Driver and Fleet Management Systems to provide data transfer options using GSM, CDMA and 802.11b in addition to manual data keys, IRD has also tripled their customer base in less than 12 months.

IRD continues to utilize a targeted vertical market strategy to deliver solutions to key customers in the forestry, oil and gas and occupational (solid waste, street sweepers and site preparation equipment) vehicle industries in North America. With the addition in early 2005 of automated driver logs, expanded driver identification and security options, a remote data recovery solution using satellite communications and the ability to directly capture information from J1708, J1939 (CANbus) and J1850 (OBDII) vehicle data buses, IRD expects to realize significant growth in this business initiative for the foreseeable future. In addition, with the ongoing expansion of our distribution and VAR sales channels, IRD's customer base is also expected to continue to increase in 2005.

IRD provides service support across North America through a service partner network. For more information concerning IRD Driver and Fleet Management System solutions, please contact Mr. Tony Reynolds, Fleet Sales Manager at tony.reynolds@irdinc.com or 540 955 9051. For more information concerning our product and system offerings, visit our website at www.irdinc.com
