### **IRD INTRODUCES NEW ACCESSORY FOR SAW WHEEL LOAD WEIGHERS**

**July 15, 2004** – International Road Dynamics Inc. (IRD) introduces the UniMUX, a new serial interface module which connects several SAW Wheel Load Weighers together for axle load and gross vehicle weighing. The SAW is a portable, static wheel load weigher which is used to check vehicle loads and enforce weight regulations.

Each UniMUX collects data from a pair of SAW Wheel Load Weighers and sends the data to a connected PC or Laptop Computer allowing the user to view multi-axle loads, gross vehicle weight, overloads, date and time, weighing number, site and operator number. Up to 8 SAW Wheel Load Weighers can be connected in this manner.

The SAW Wheel Load Weigher, which meets NTEP Handbook 44 and OIML certification standards, is an electronic, low profile portable scale. The scales are hermetically sealed and made of corrosion resistant materials, resulting in superior durability and a long service life.

There are many applications for the SAW Wheel Load Weigher including:

- Check weighing for law enforcement purposes
- Weight and load control of trucks and transport vehicles in all industries
- In-vehicle design and production to determine wheel and axle load distribution.
- Stability tests on special vehicles such as fork lift trucks
