

FM Keypad

Smart solution to extend your fleet information

The Fleet Manager (FM) Keypad is a smart data input and display unit, designed to work in conjunction with the FM200 Plus on-board computer. By using the FM Keypad the drivers are able to select driving reasons for their trips. In combination with a GSM modem and a hands-free kit they are additionally able to select one of the pre-defined phone numbers for making phone calls from the vehicle. The driving reasons are logged by the on-board computer, along with all other trip information, and downloaded to the front-end software for reporting. By using the GSM connectivity the unit will also display the GSM connection visually.

Easy handling of all functionality's

The data capturing to select a driving reason and the activation of the voice functionality is able in a simple and easy way. Each button of the FM Keypad has two functionality's which can be activated with different kind of key presses. Quick button presses are used for driving reason selection and delayed button presses are used for making voice calls.

The following driving reasons are selectable:

- Business
- Commute
- Private
- Other

Up to 4 predefined phone numbers can be called out of the vehicle. But every income call can be accepted.

FM Keypad
