

# Security Solutions

IRD has 30 years experience in Intelligent Transportation Systems (ITS) providing systems integration and customized solutions.

IRD offers a variety of complementary products that provide increased access control and security. These products can be used as a stand-alone solution or integrated into a complete access control and security system.

IRD Specializes in supplying products and systems for security, vehicle weight enforcement, commercial vehicle operations, toll, security, roadway safety, traffic data collection and driver/fleet management.

IRD systems are designed and built by a multi-disciplinary, customer focused team which fuses core IRD technologies with integrated computing and communications technologies.

# Security Solutions

# Access Control

## Identification Tags

Identification tags to monitor or grant permission for entry and exit. Track the arrival, departure, and location of goods.

## Under Vehicle Surveillance Systems (UVSS)

Check underneath vehicles by capturing real-time video. Ensure security by examining areas underneath the vehicle that are commonly used to conceal controlled or dangerous goods.

## Tire Deflators

Disable vehicles upon unauthorized access. Prevent vehicles from entering through exit points.

## Virtual Weigh Stations

Combine Weigh-in-Motion (WIM) technology with cameras and web access to monitor vehicle weight.

## Fleet Vehicle Alarms

Combine various sensors & communication devices to monitor unauthorized access of fleet vehicles. Alarms are monitored 24/7 by a control center.
